Coffee Maker

Brewing Time

A good rule of thumb is to allow one minute for each cup of coffee brewed.

Operating Instructions

1. Fill coffee pot with COLD water to desired cup amount
2. Add coffee to basket (see equivalents below).
3. Plug coffee pot into standard electrical outlet
4. The red ready light will come on when it has finished brewing. You can then remove the basket. The pot will keep coffee hot.
5. When finished please unplug the coffee urn, drain out any remaining coffee, discard coffee grinds, and Place the basket and stem back inside.
6. Each coffee maker should be plugged into a separate circuit. Each unit draws between 8.5 and 12.5 amps. (A standard circuit is just 15-20 amps.) Two on the same circuit may result in one not heating up or tripping the breaker.
